Agenda

Our Perspective

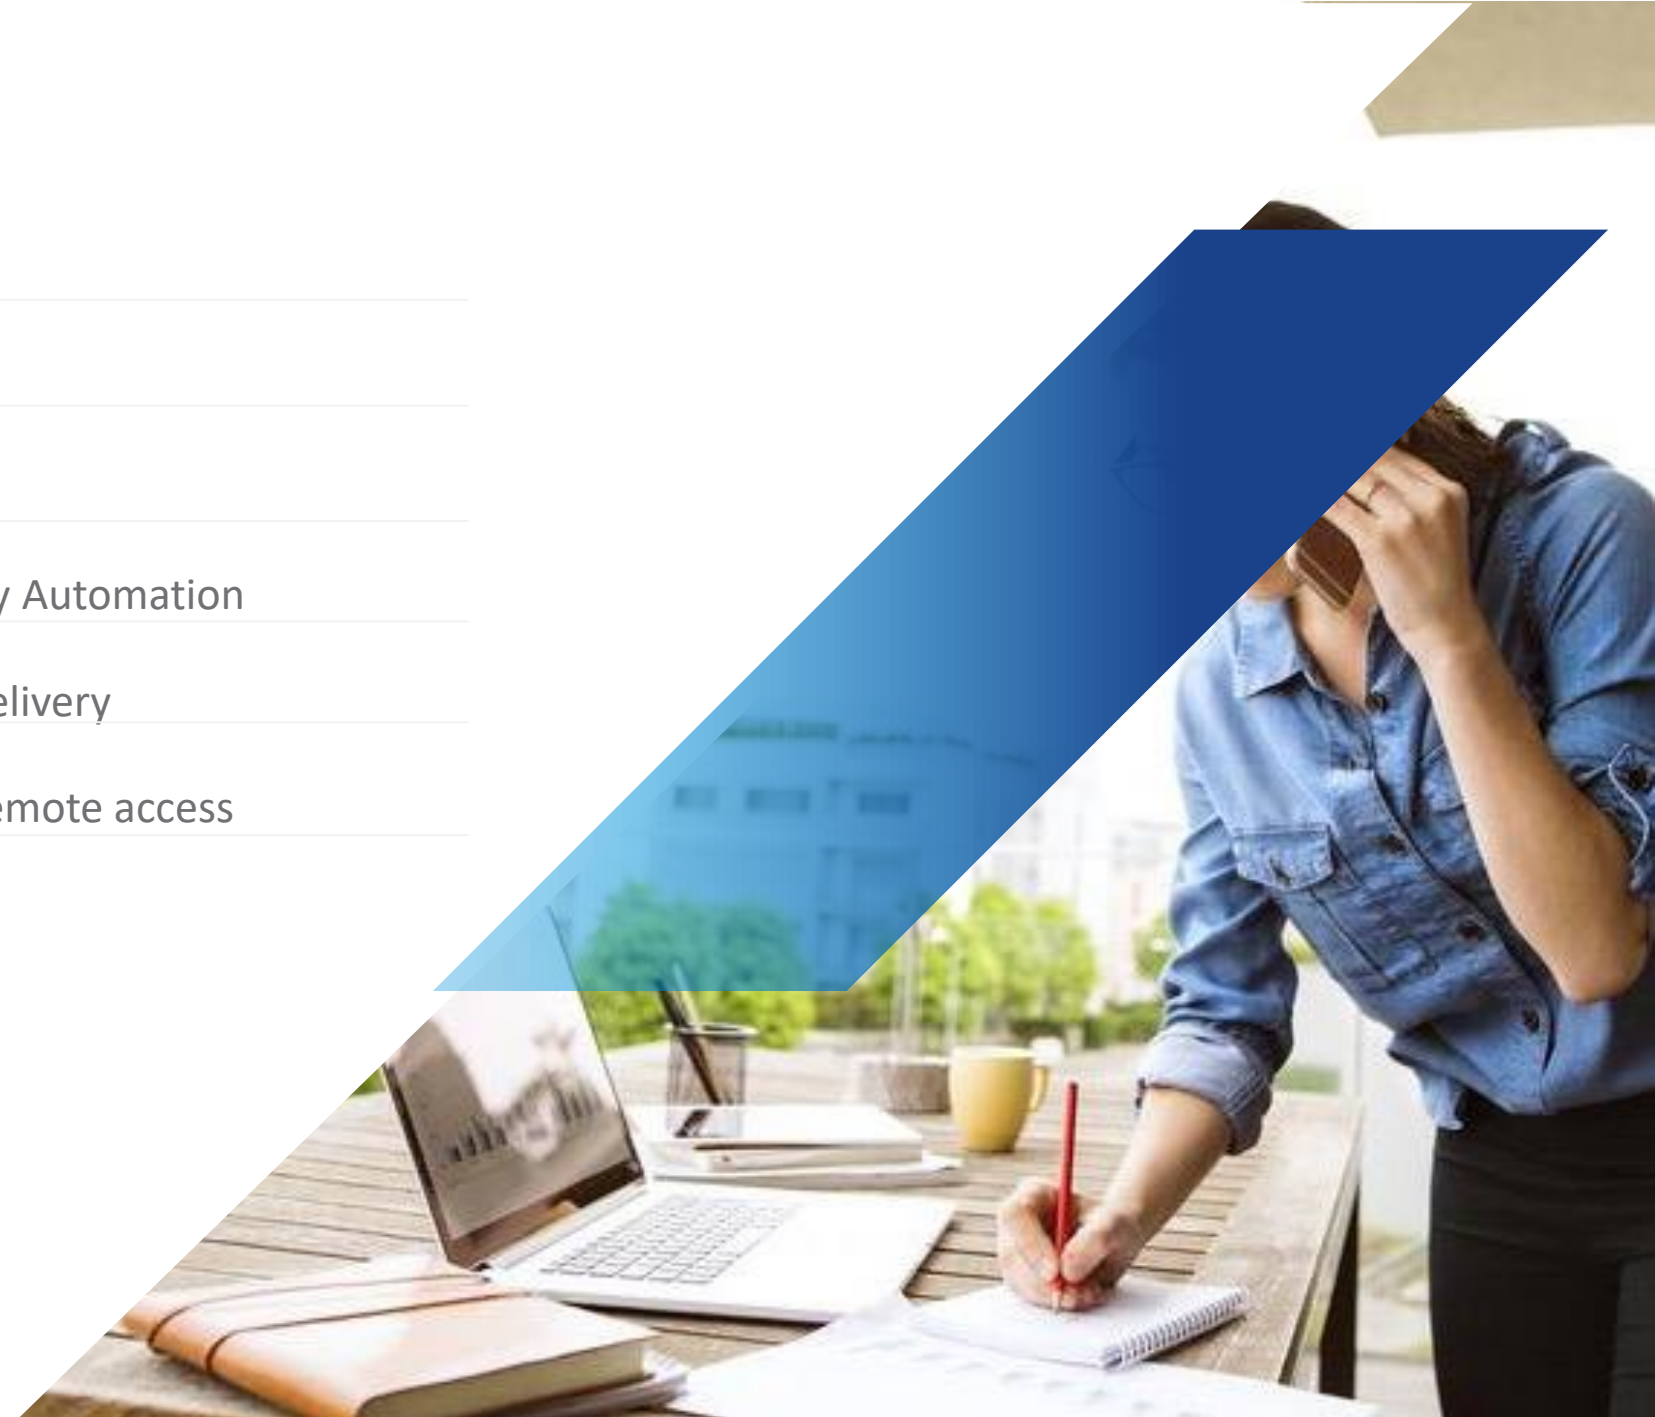

Context and Climate

Future Ready: Cloud Network and Security Automation

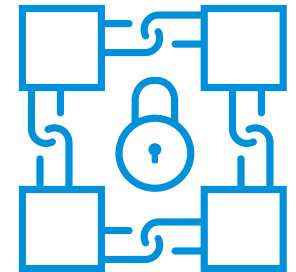

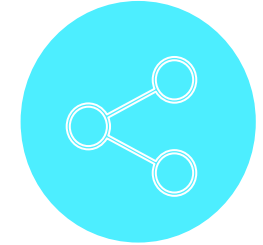

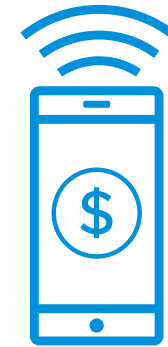

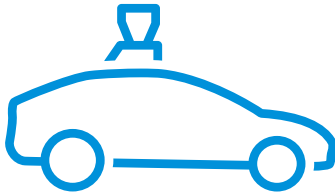

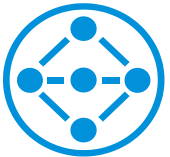

Future Ready: Multi Cloud Applications Delivery

Future Ready: WAN transformation and remote access

VCN Dream Bigger

New Technologies and Connectivity, Mean New Opportunities

New opportunities to **empower**, **protect**, and **accelerate** the delivery of customer and employee **experiences**.

New challenges, too.

The Landscape of Today - ¿Where is my Network?

Context and Climate

In rapidly changing and uncertain times, technology leadership will lead organizations towards the future.

Every business in every industry must face difficult questions:

- How are we responding to protect our infrastructure, our employees, our customers and our business?
- What areas of our business should we adapt, evolve and change?
- How do we build a stronger, more secure, more resilient business for the future?
- How do we protect ourselves, now and against future challenges?
- How can we use technology to build for the future?

Common Operations

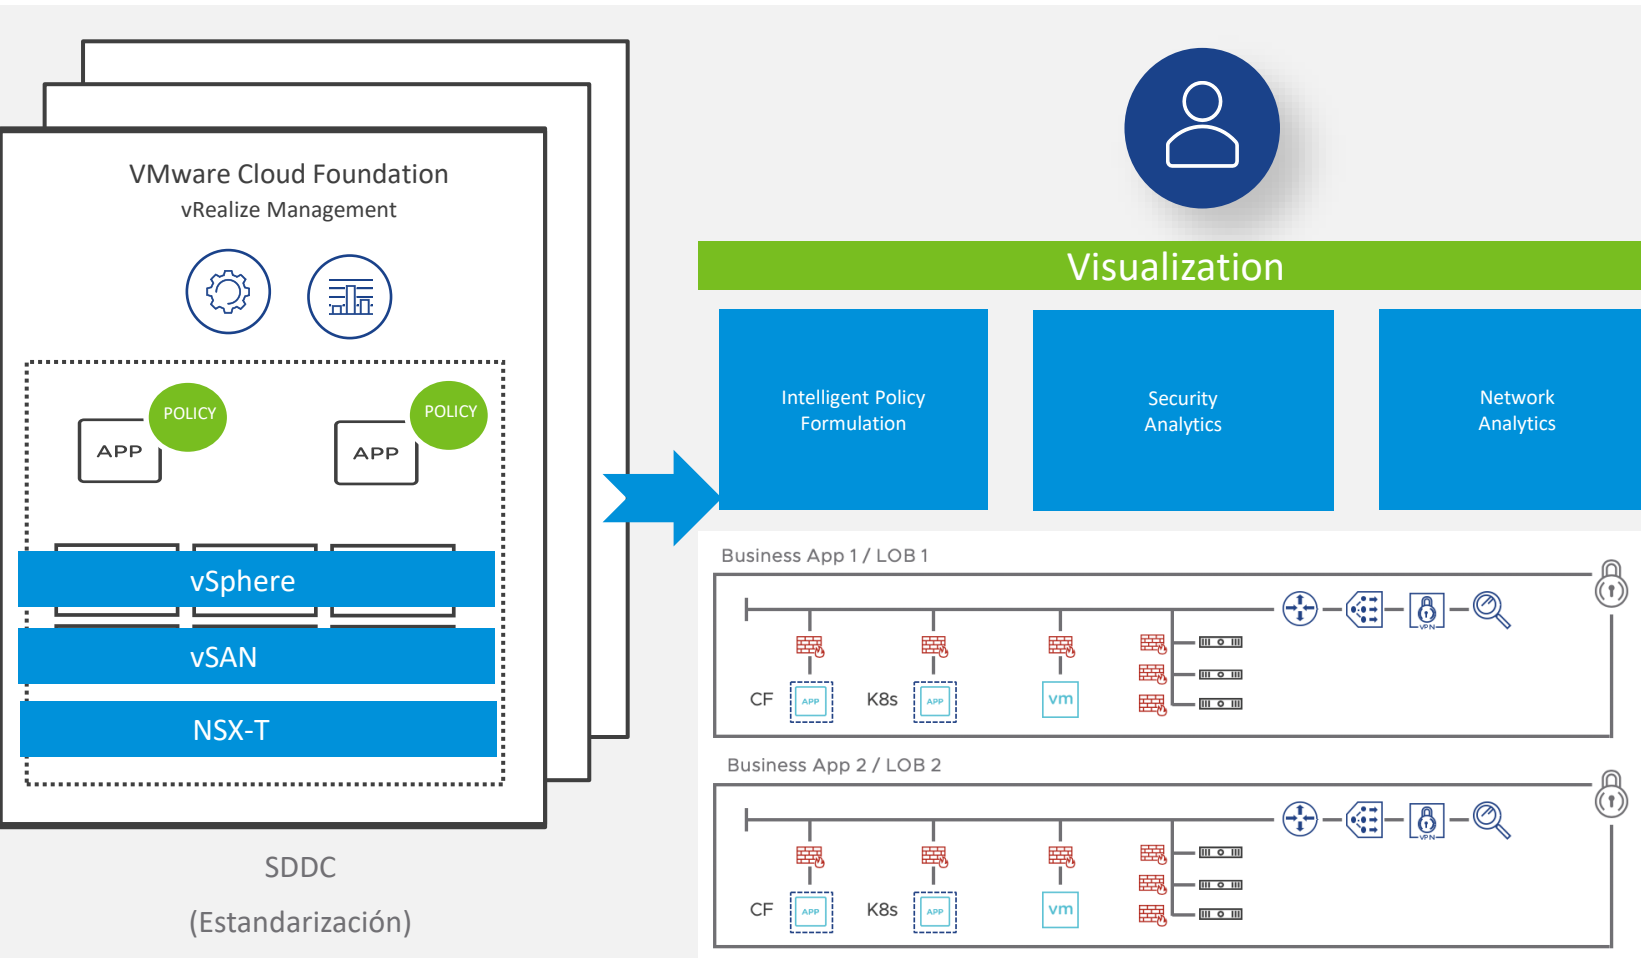

Intrinsic Security

The New VMware Portfolio

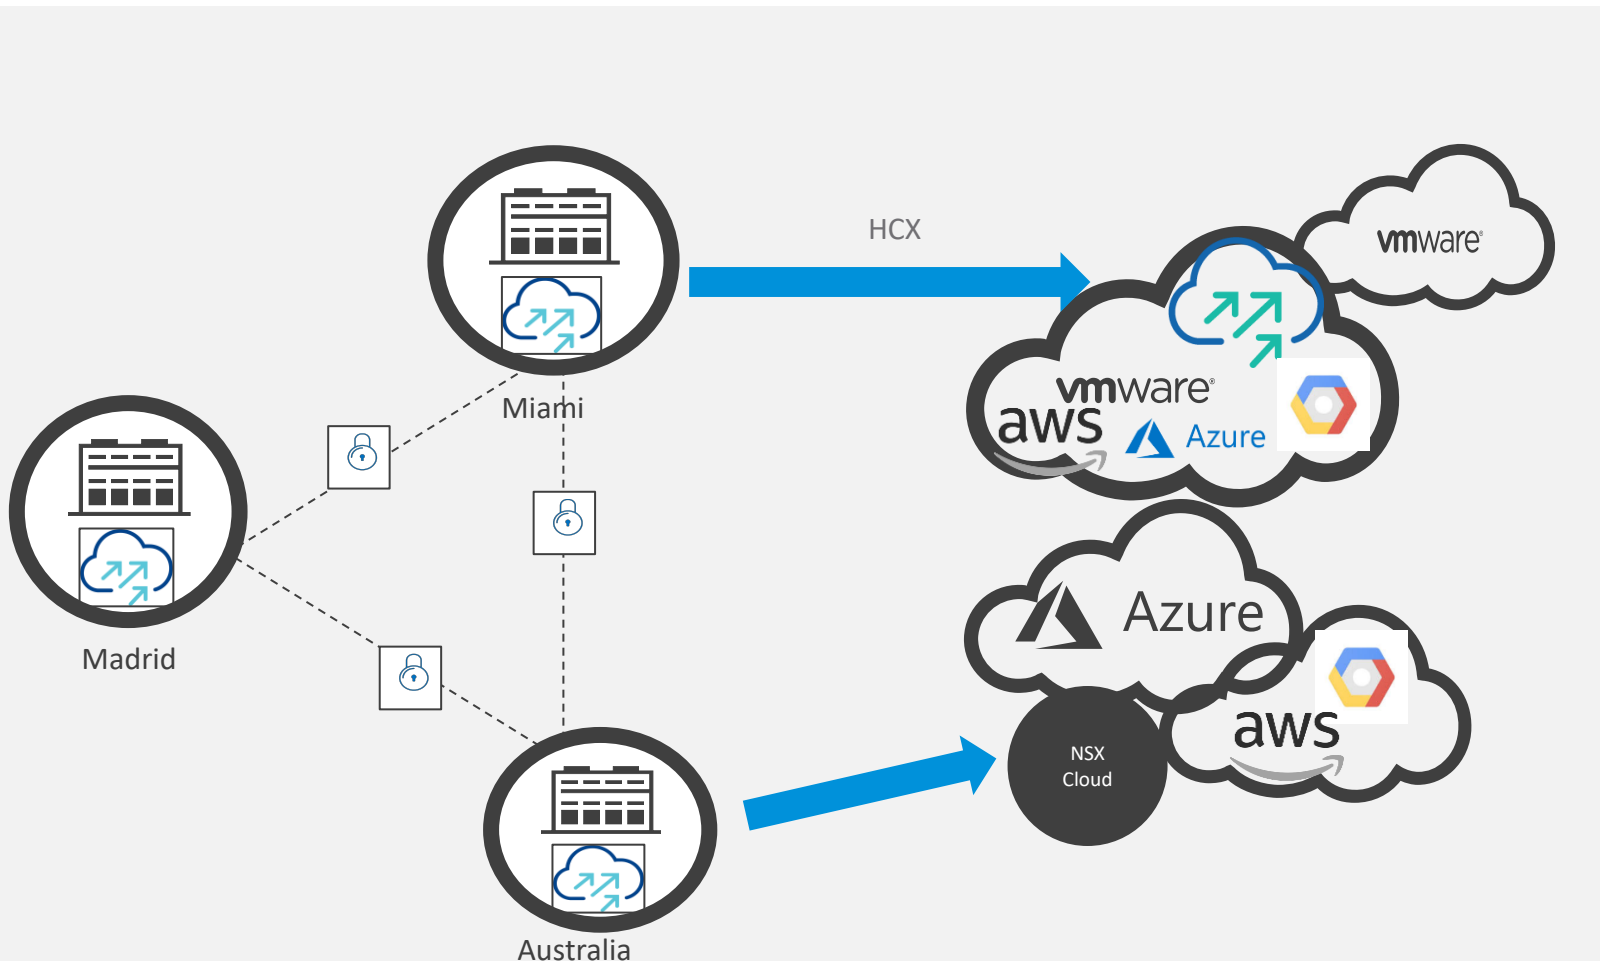

Virtual Cloud Network and Security - Zero Trust Virtual DC

Reducir superficie de ataque, monitorización y automatización redes. NSX for Security

- Implementar microsegmentación a nivel de VM y Containers.
- FW & Políticas de seguridad individuales
- Aplicación de Políticas a cualquier contexto
- Visibilidad y Analítica en seguridad y networking, a nivel 7 de Aplicación y Usuario.

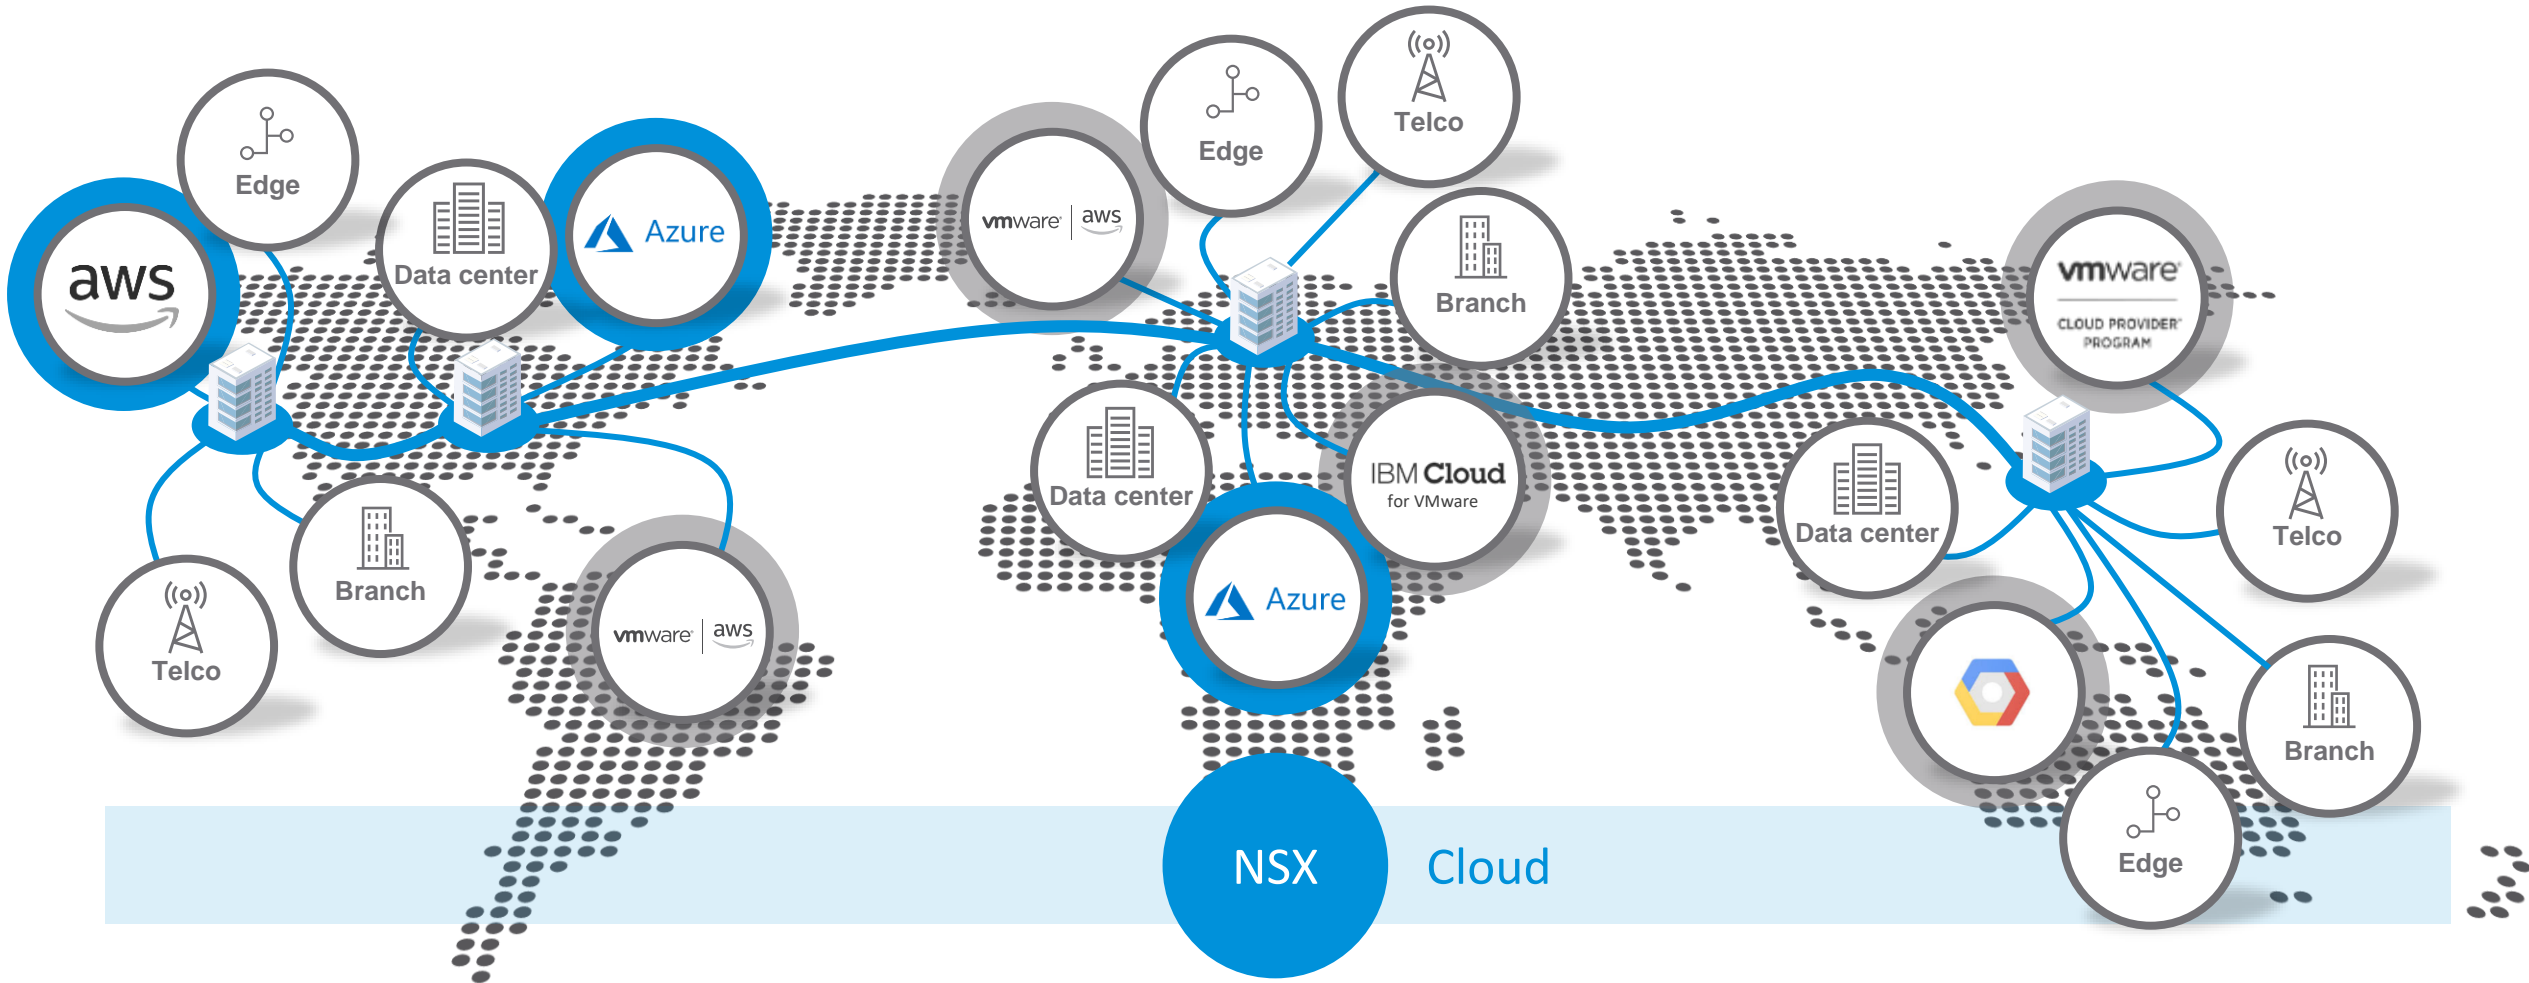

Virtual Cloud Network and Security – Multi Cloud Extension

- Extender Seguridad y Networking tanto en entornos Híbridos como en Cloud pública
- Cloud Partners con VMware full Stack. Extensión DC.
- Visibilidad end-to-end
- Cumplimiento normativo, seguridad y gobierno continuo en Cloud Pública

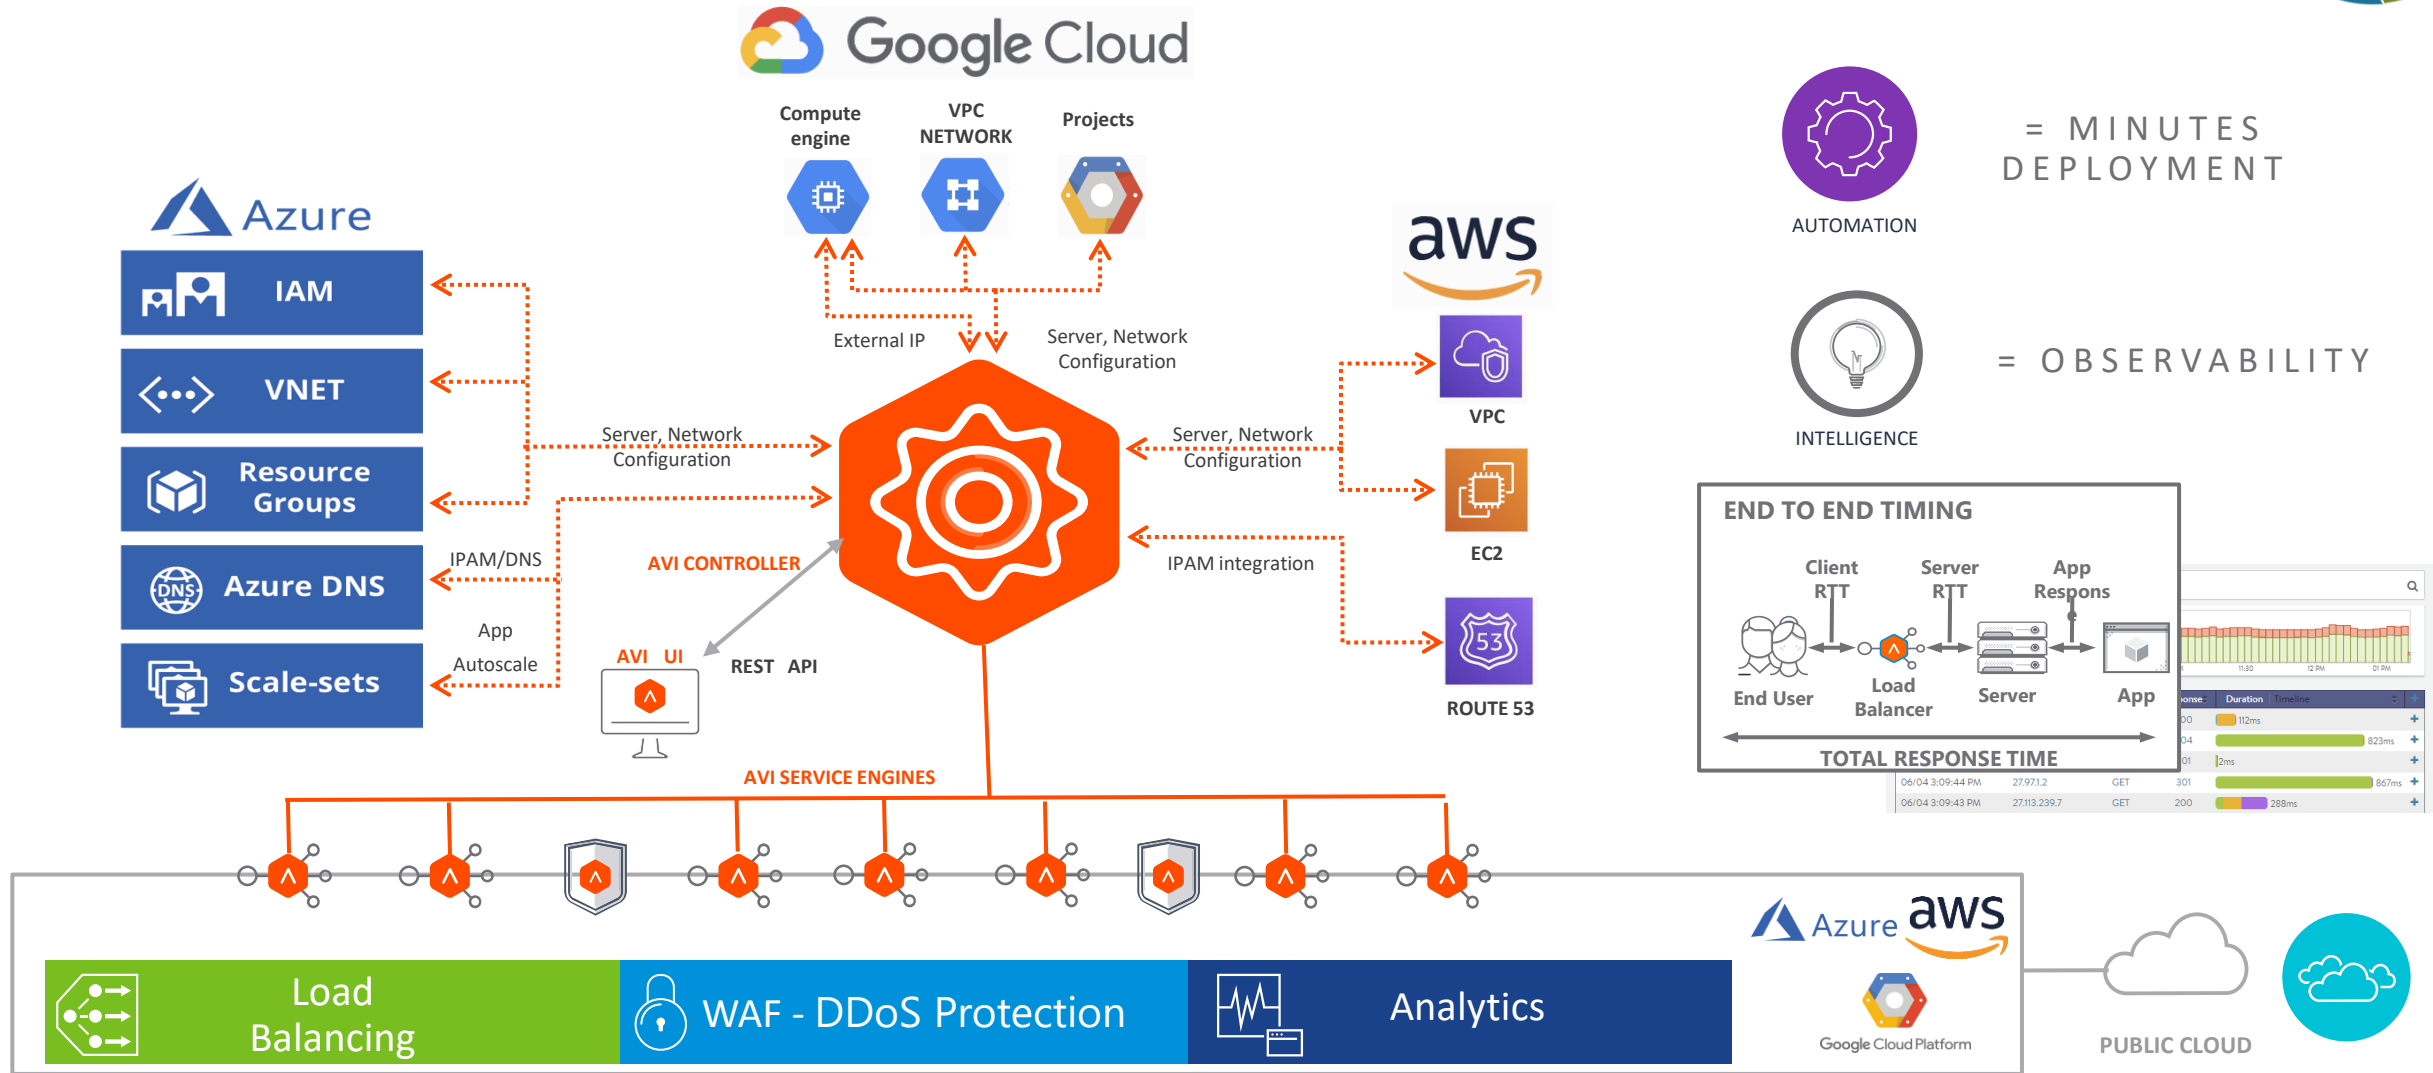

The Virtual Cloud Network

Delivered by VMware NSX

End-to-end consistency from data center
to branch to cloud

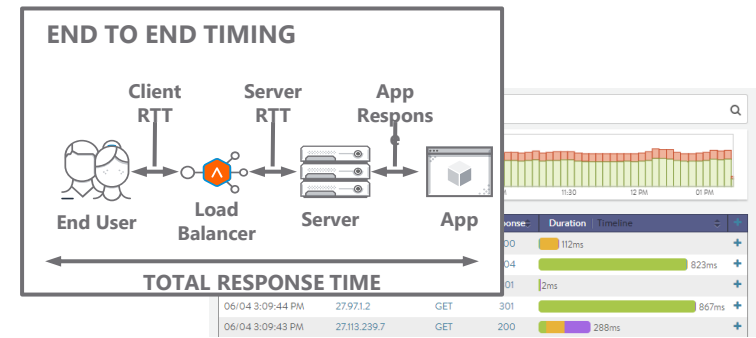

Multi Cloud Applications Delivery, WAF & Analytics

= MINUTES DEPLOYMENT

= OBSERVABILITY

Enterprise/Over-the-Top Architecture with SD-WAN - Velocloud

VMware SD-WAN as a service

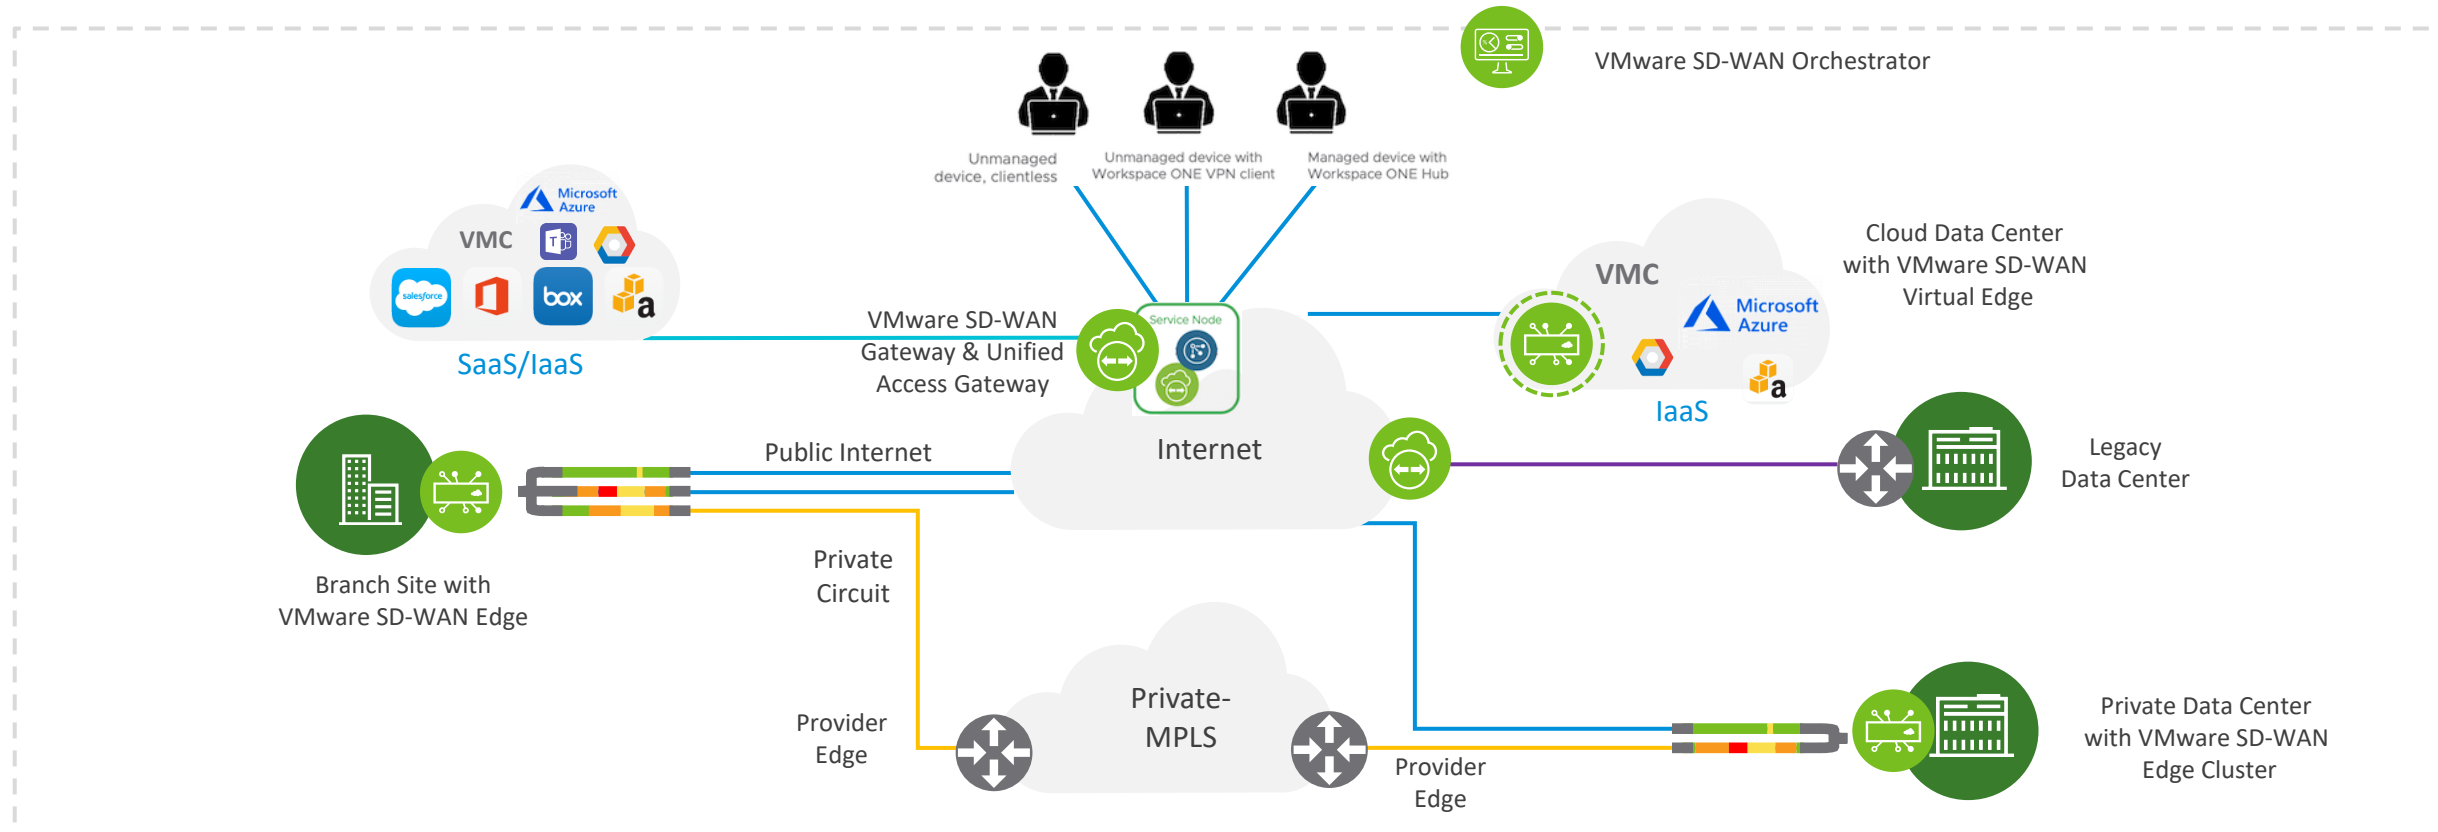

Hub for SD-WAN to data center including private links

Hub-less design for legacy data center

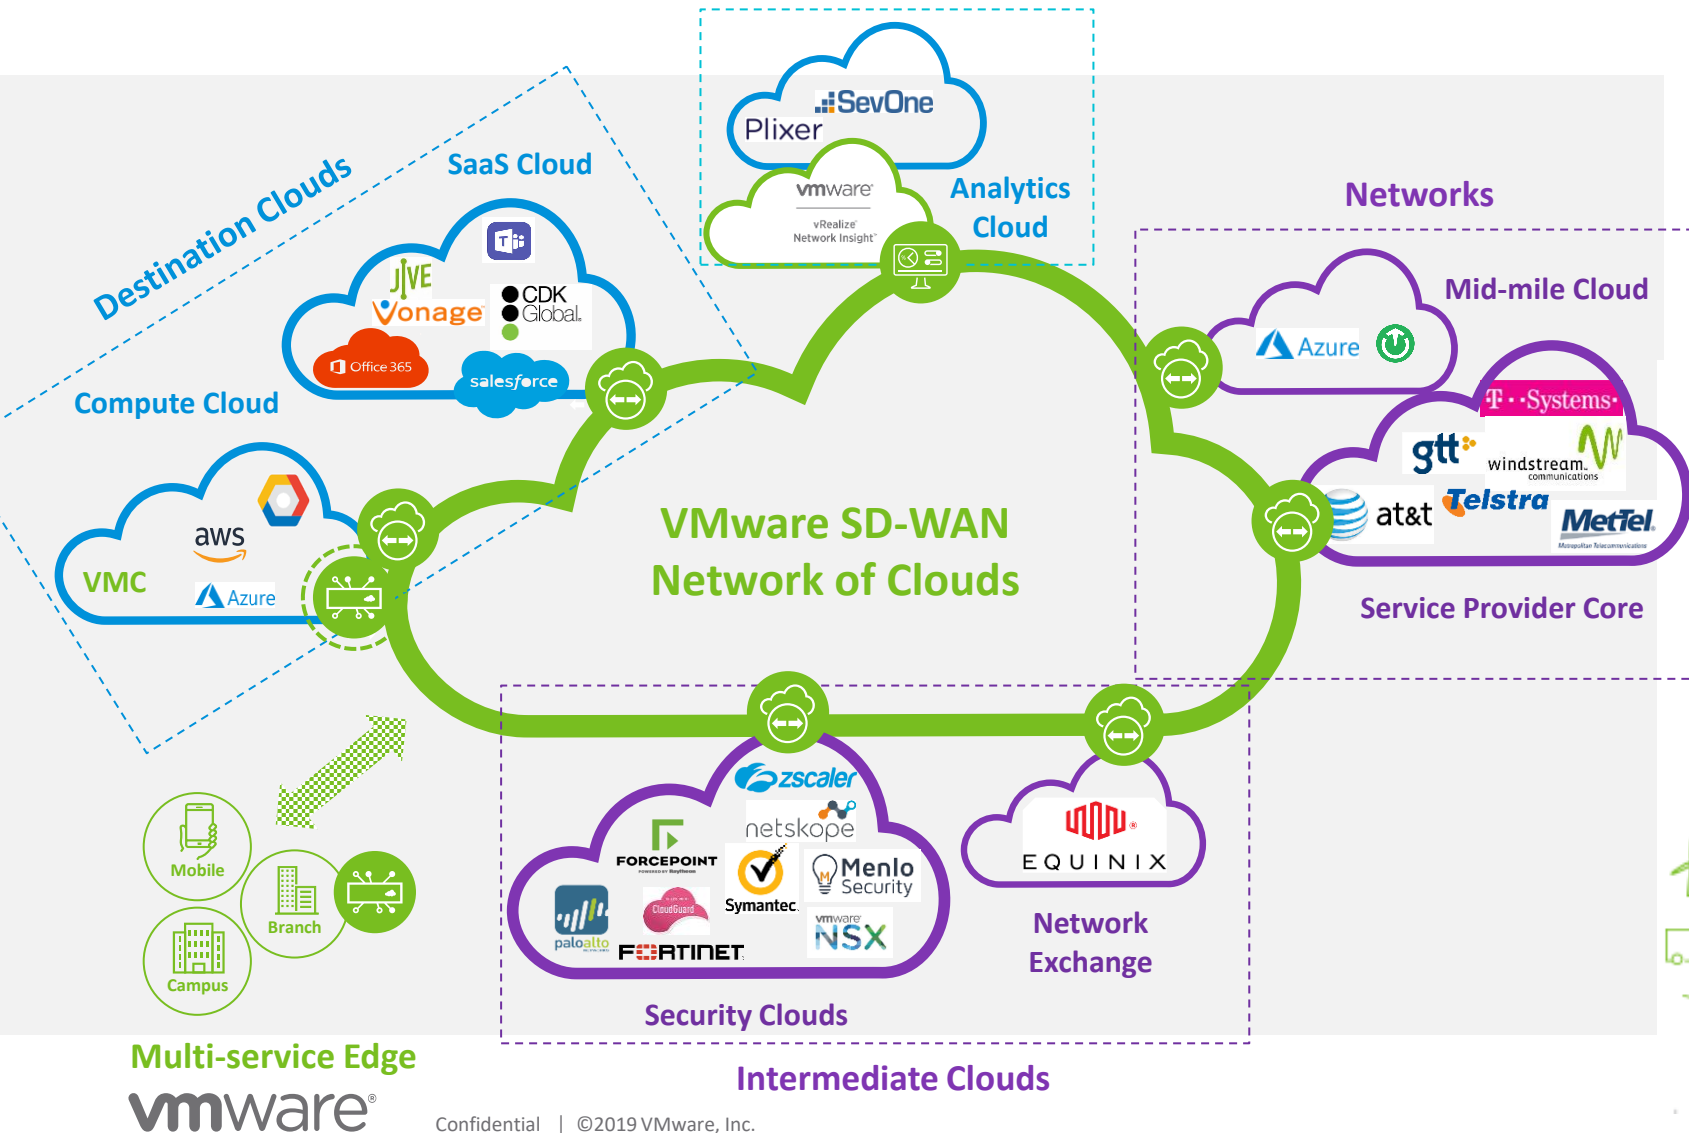

Hosted gateways for SD-WAN to cloud

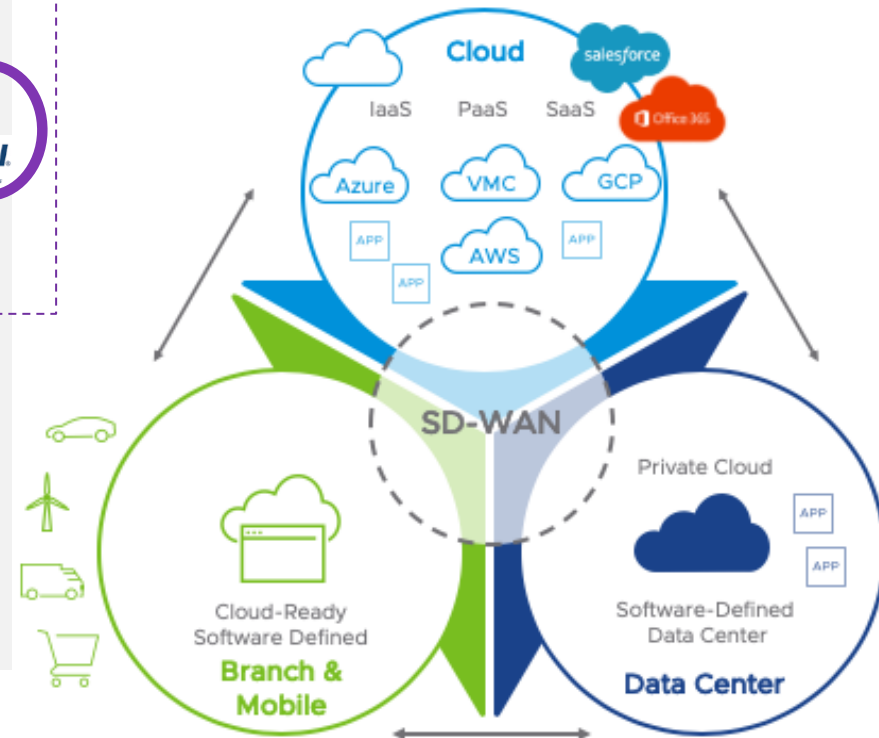

WAN transformation, SDWAN Anywhere & Path to SASE

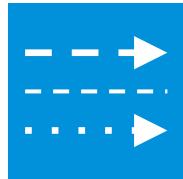

Network of Clouds – SDWAN Transformation & Edge Computing

- SDWAN Branch to DC Si, pero. ¿el usuario y los servicios cloud...?

SD-WAN Security – Local, Cloud or 3rd party Services Insertion

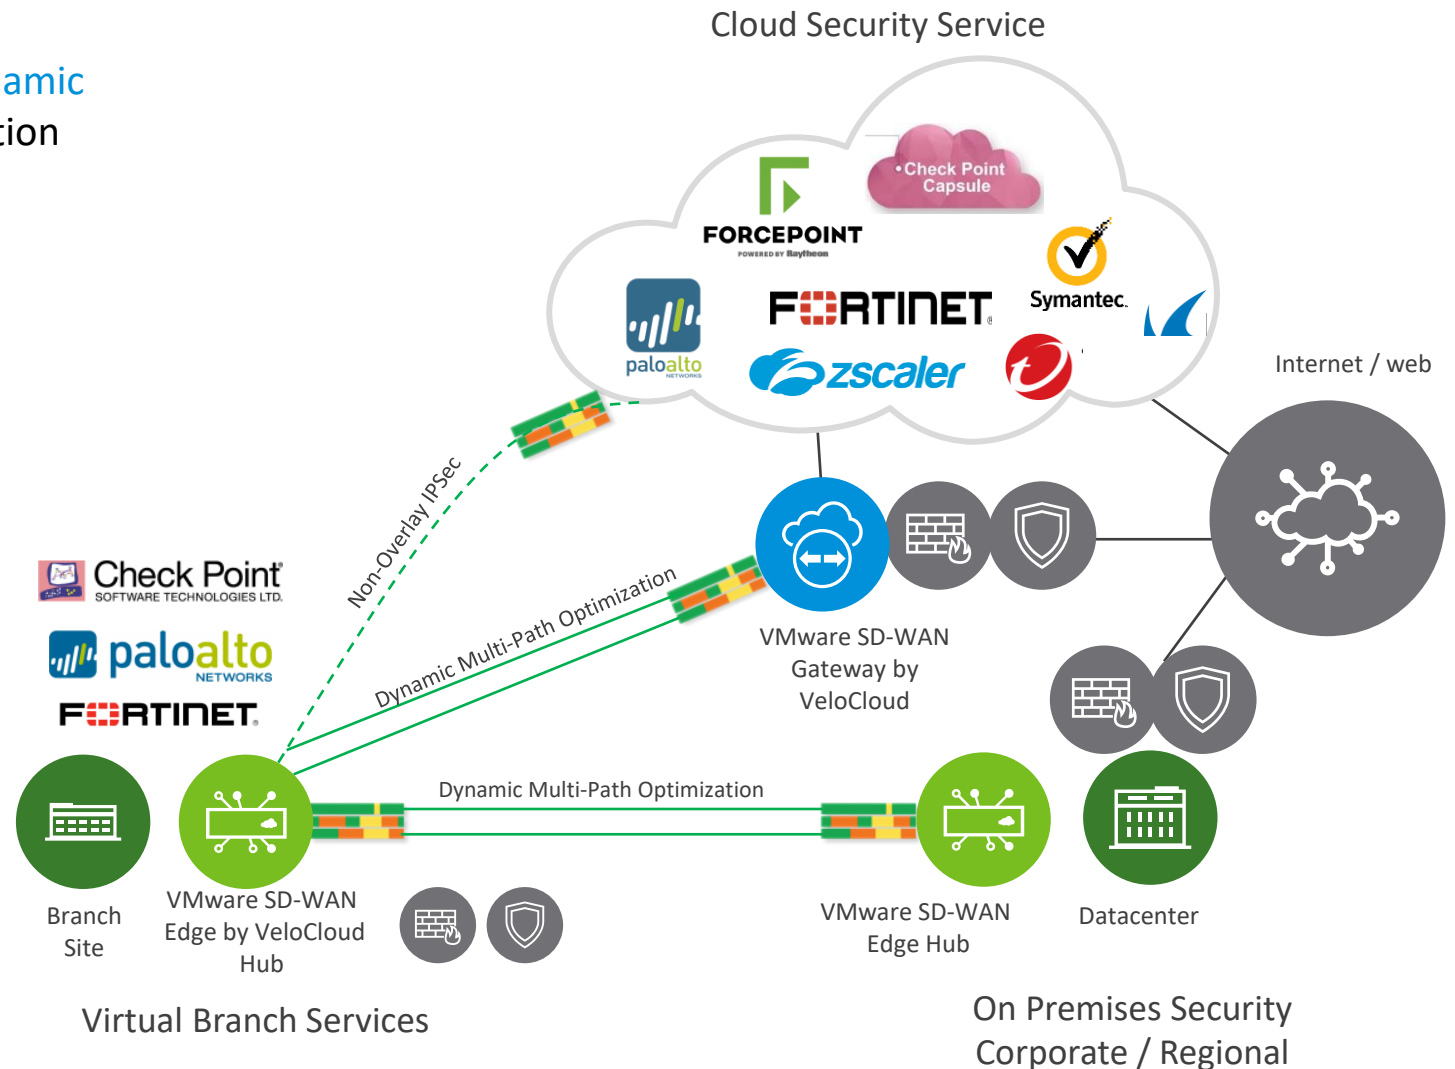

VMware SD-WAN by VeloCloud **Dynamic Multipath Optimization** delivers application performance and reliability to cloud

Single-click **Application-Aware Policies** for granular service insertion

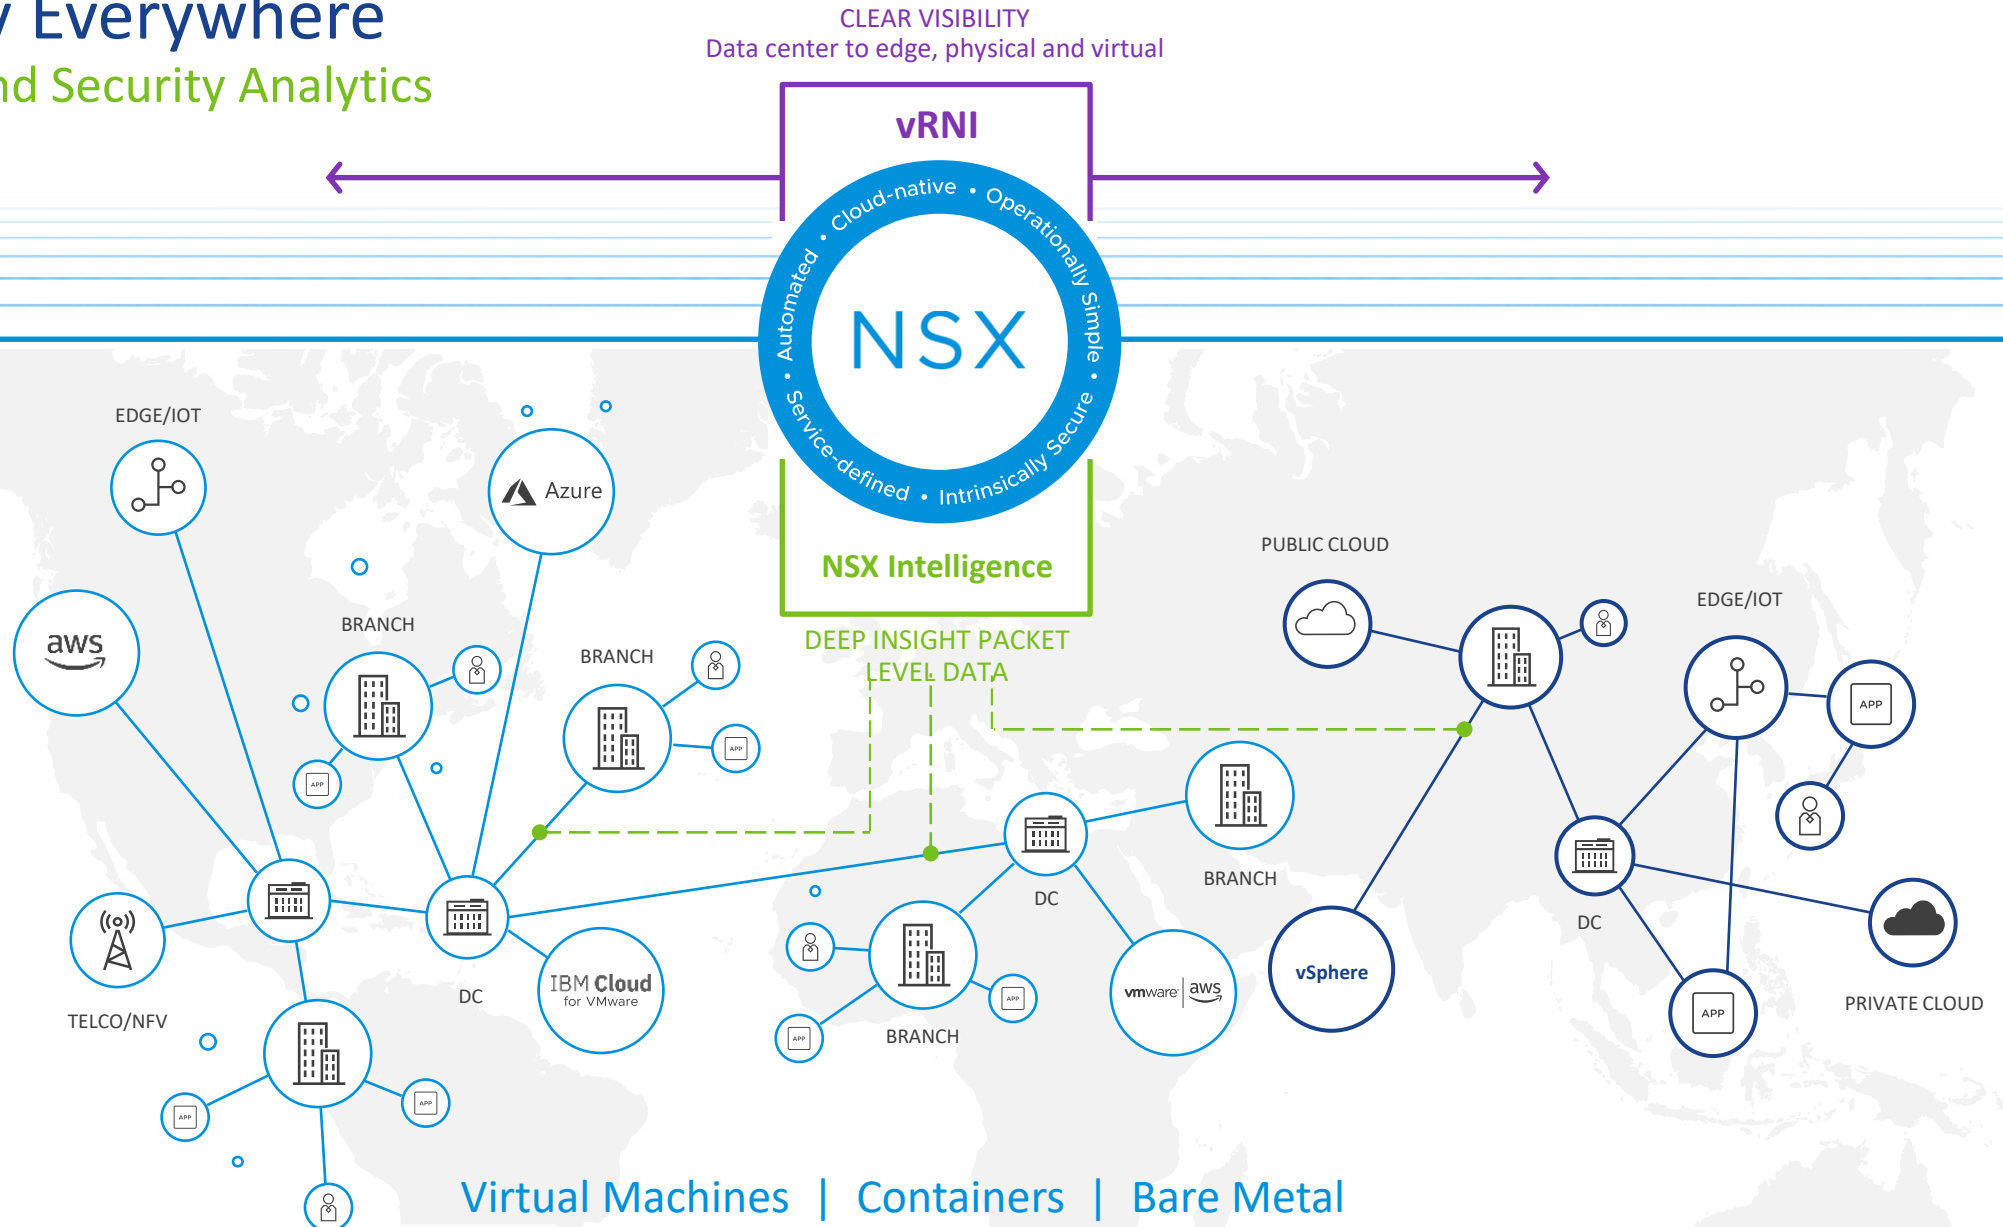

Automated tunneling eliminates site by site configurations

Right Journey to SASE

Visibility Everywhere

Network and Security Analytics

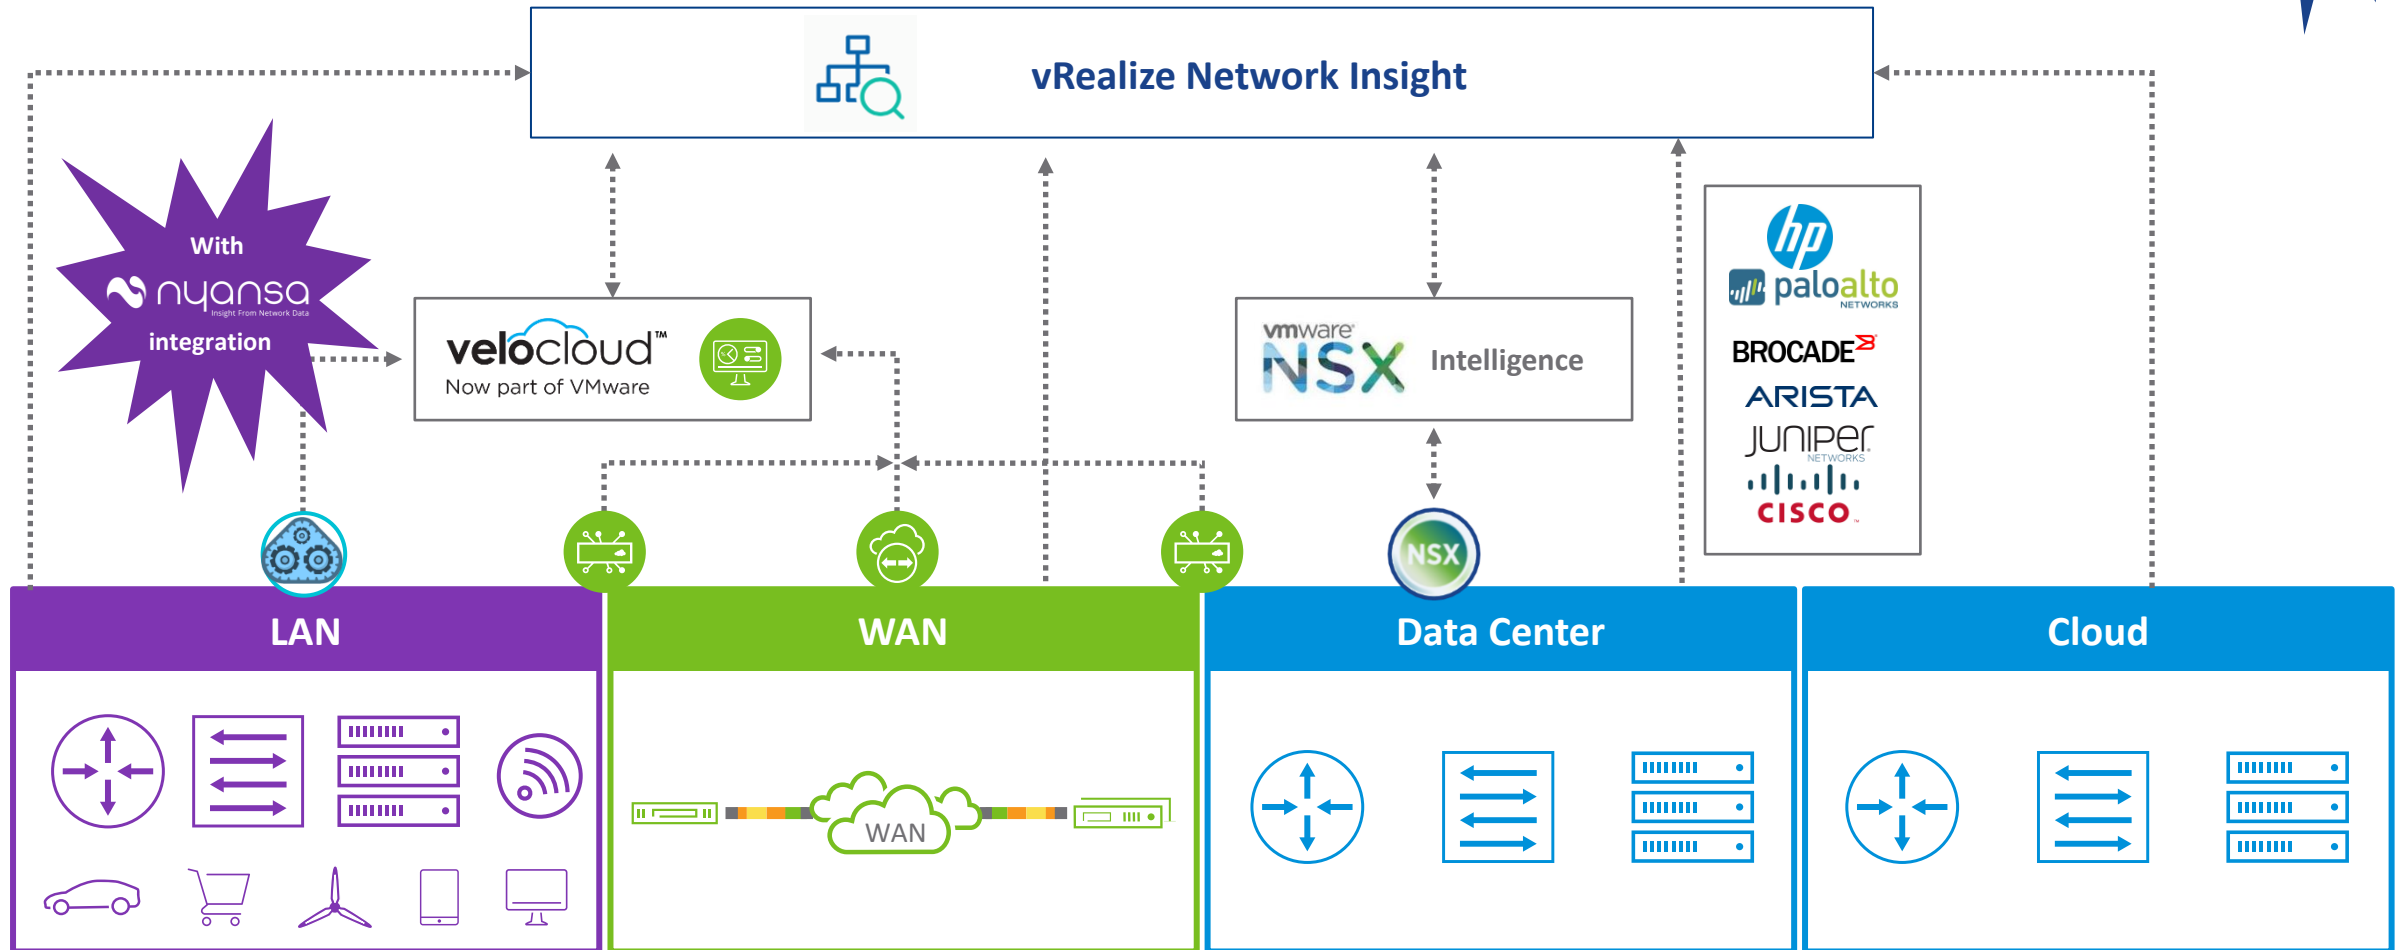

VMware End to End Analytics over Multi-Vendor Infrastructure

Bringing branch/campus, WAN, data center, and cloud visibility together

Network application Map, audit & traffic discover, troubleshooting and optimization

Pre-sales assessment tool using vRNI now available

VCN Dream Bigger Blueprint
